

03 - Content Model and Rollover System

[Content operations playbook](#) | [Repeatable content templates and rollover workflow](#)

Formal name: Content operations playbook

What this document is for

Use this as the content operating system. Every new essay, project, playlist, or Now update should be processed through a template so the site stays coherent as it grows.

Rollover principle

New entry comes in -> classify it -> write the proof line -> add North signal -> connect it to one other asset -> publish/update data file -> rebuild site

Core content types

Content type	Source of truth	Website role	Primary CTA
Essay	Substack	Interpretation layer and proof of thinking	Read on Substack
Project	GitHub	Proof of building and practical AI fluency	View on GitHub
Playlist	Spotify	Cultural signal and pattern-recognition layer	Open on Spotify
Now item	Manual monthly update	Shows the site is alive	View Now / none
About proof point	Manual	Connects identity to credibility	Contact / LinkedIn

Essay entry template

```
slug:
title:
source: Substack
sourceUrl:
date:
subtitle:
oneLineIdea:
summary:
northSignal:
whyItMatters:
tags: []
relatedProjectSlug:
relatedPlaylistSlug:
featured: true/false
image:
```

Use this as production direction for design, content, and front-end implementation.

Project entry template

```
slug:  
title:  
githubUrl:  
language:  
shortDescription:  
plainEnglishDescription:  
whyIBuiltIt:  
whatILearned:  
whatThisProves:  
builtWith: []  
northSignal:  
status: prototype / active / archived  
featured: true/false  
image:
```

Playlist entry template

```
slug:  
title:  
spotifyUrl:  
mood:  
whyItBelongsHere:  
northSignal:  
relatedEssaySlug:  
tags: []  
featured: true/false  
coverImage:
```

Now update template

```
lastUpdated:  
building:  
writing:  
reading:  
listening:  
openQuestions: []
```

Rollover workflow for new essays

- Publish full essay on Substack first.
- Create an essay card in the website data file.
- Write a North signal in one sentence.
- Add why-it-matters copy that explains what the essay proves.
- Connect the essay to a project or playlist when possible.
- Feature only the strongest essay on the homepage. Keep latest items on Writing.

Rollover workflow for new projects

- Create or update GitHub README first.
- Add a website project record with plain-English value.
- Write what-this-proves for non-technical visitors.
- Add tool tags and one project image/screenshot.
- Feature only one or two projects on homepage. List all public repos on Projects page.

Quality checklist before publishing

- Does this entry prove something useful about Darwin?
- Is the CTA clear and external links working?
- Is the North signal actually interpretive, not decorative?
- Are tags consistent with existing tags?
- Is the summary plain enough for a non-technical visitor?
